

RAVENii "Security as a Service" Solutions

Specializing in the convergence of security technology and service dynamics

RAVENii's outcome driven consulting and security services provide expertise that delivers information to plan and secure organizations.

RAVENii's solutions help organizations defend against increasingly complex cyber attacks by providing comprehensive and expert security services — quickly, effectively and reliably. RAVENii expertise ensures that key assets are kept safe against advanced threats by complementing an organization's expertise and investments with "as-a-Service" monthly subscriptions, build to suit programs, transparency through metrics and access to experts on-demand.

"Security as a Service" solutions include:

- Managed Endpoint Protection
- Continuous Threat and Vulnerability Management
- Incident Response
- Vulnerability Remediation
- Secure DNS
- Encryption
- Firewall

The RAVENii "Security as a Service" dynamic subscription model and unique three tier system, blends RAVENii security engineers using industry-leading tools and processes with organization's staff and processes. The approach helps ensure security investments are effective against emerging threats.

Benefits of "Security as a Service" solutions include:

- Effective security solutions deployed in days
- Lowered operational costs
- Access to experts on-demand as-needed
- Elimination of administrative overhead
- Reduction of licensing and maintenance costs
- People and process optimization
- Visibility into security costs and effectiveness

RAVENii's "Security as a Service" solutions unify the dynamics of technology and security into single consumable services that complement organization's investments and skills; reducing costs, increasing visibility in investments, reducing operational bottlenecks and increasing security.

On Time, On Track

Provides effective solutions in days and access to expertise on-demand, keeping security on target

Measurement focused

Increases visibility into security effectiveness and costs with powerful metrics

Data Driven

Advanced technologies provide a wealth of data to help plan and optimize processes and resources

Integrated

Integrates with current staff and investments to complement and enhance security programs

Cost Aware

Drives down costs by providing a platform that promotes planning, cost analysis, discovery of bottlenecks and duplication issues

RAVENii "Security as a Service" Solutions

Specializing in the convergence of security technology and service dynamics

TIER 1

Security Infrastructure as a Service (SlaaS)

SlaaS provides turnkey solutions and platforms for customers to operate. The service includes licensing, maintenance and administrative upkeep. A Service Desk manages alerts, work flows and incidents.

TIER 2

Cyber Security as a Service (CSaaS)

CSaaS builds upon the 1st tier by including the day-to-day management and operation of the turnkey solutions and platforms. Customers have access to the Service Desk to create requests and monitor all management activities, but the operation and configuration is performed by RAVENii support.

TIER 3

Incident Management as a Service (IMaaS)

IMaaS builds upon 2nd tier services by providing incident management and triage activities for critical security incidents. The standard service includes full integration into the RAVENii Security Incident Response and Management Team that:

- Provides 24x7 security monitoring
- Guarantees an under 4 hour response time for critical incidents
- Locks in reduced bill rates for post incident activities

To find out more about the complete line-up of RAVENii™ "Security as a Service" solutions please contact us.
