

# Security Assessment Services

Providing essential security capabilities to organizations as a flexible subscription model

RAVENii Security Assessment Services take a “hackers-eye” view of your facilities, network, systems and application security. Using a large set of tools and techniques, we test and verify your information systems ability to block sophisticated unauthorized users. This assessment process uses internal and external vulnerability scanning, external network penetration testing, wireless networking security attacks, social engineering and physical security techniques.

## Assess and Report

RAVENii collects assessment findings in a customized report that documents potential vulnerabilities and eliminates false positives. Validation is performed through targeted penetration exercises focused on high-risk findings — areas that, if exploited, can lead to access to critical systems and sensitive information. This report, presented in technical and non-technical formats, offers detailed, actionable information to minimize and thwart the threat.

## Security Assessment Services include:

- Visibility and metrics of vulnerabilities
- Vulnerability assessments of infrastructure
- Vulnerability assessment of key systems
- Microsoft server and client OS review
- Network infrastructure code review
- Middleware systems review
- Database systems review
- Remote assistance
- Attack surface debriefing

## Benefits

Enhance your program by building to suit instead of overlapping investments or employees

Increase visibility into security effectiveness and costs with powerful metrics

Lower operational costs by using RAVENii experts only when you need them

Eliminate administrative maintenance and upgrade activities

# Security Assessment Services

Providing essential security capabilities to organizations as a flexible subscription model

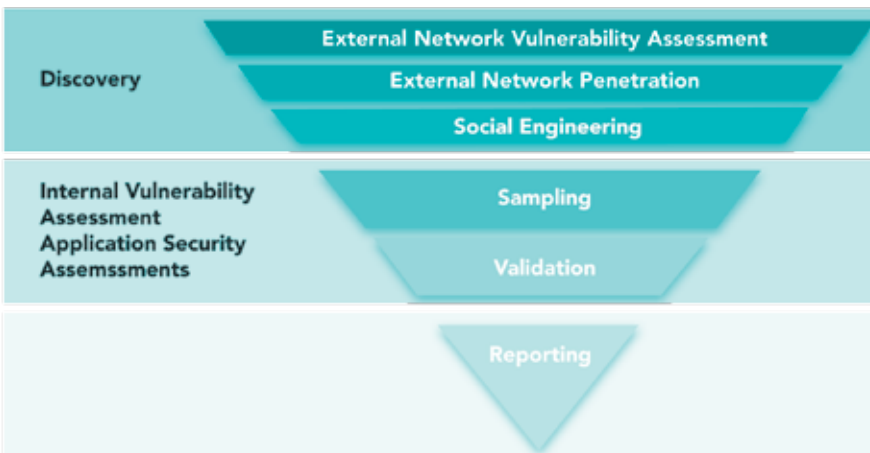

## The Strategic Advantages of RAVENii Security Assessment Services

As with most RAVENii solutions and services, our Security Assessment Services are proactive — seeking out the gaps where you may be most vulnerable, step-by-step. We also help you evaluate what's merely vulnerable versus what represents a true risk.

RAVENii Security Assessment Services give you the following strategic advantages:

- A better understanding of the “Gaps”
  - True risk
  - Merely “vulnerable”
- Actionable data for a proactive plan
  - Eliminates false positives
  - Minimize (or eliminate) threats
  - Identification of priority action items to close gaps quickly

### Methodology

**Solving your IT, Audit and Compliance issues before they become problems.**

## Technical Features

### Vulnerability Assessments

Cloud-based or on-premise  
24x7 passive assessments  
Regular active assessments  
External and internal profiles  
Indicator of Compromise (IoC)

### Regulatory and Compliance Assessments

Critical Security Controls  
NERC/FERC  
GLBA/Banking  
PCI  
ISO  
HIPPA/HITECH

### Security and Network Vulnerability Assessments

Penetration Testing – Logical and Physical  
Vulnerability Assessments – Internal and External  
External Application Testing  
Wireless Security  
Social Engineering Exercises - Phishing  
Transaction Security  
Security Program – GRC

### Vulnerability Management

Attack surface debrief  
Dashboards of Risk, Aging, Compliance & Remediation  
Reporting portal and analysis  
Detailed remediation plans  
Capabilities to deploy updates and software to remediate

### Supported Platforms

Microsoft and Linux  
3rd Party applications  
Router & switches  
Databases  
Middleware  
ERP and warehouses

### Consulting services

Access to security and infrastructure expertise as needed at a locked in discounted rate
